Mumbai, India · Open to relocation & remote

SUMMARY

Full Stack Developer (MERN) and AI application builder graduating May 2026. Founded and led an 8-member Agile team shipping an incubated healthcare MVP; builds microservices, real-time systems, and guarded LLM pipelines. 135+ DSA problems solved. Seeking SWE / Full Stack / AI Engineering roles.

TECHNICAL SKILLS

Core CS: Data Structures & Algorithms, OOP, System Design, DBMS, Operating Systems, Unit Testing

Languages & Frontend: JavaScript (ES6+), TypeScript, Python, SQL, C, React.js, React Native, HTML5, CSS3, Zustand, React Query

Backend & Databases: Node.js, Express.js, FastAPI, REST APIs, Microservices, Event-Driven & Spec-Driven Architecture, WebSockets, JWT, OAuth 2.0, RBAC, PostgreSQL, PostGIS, Supabase, MongoDB, Row-Level Security

AI & ML: LLM Integration, RAG, Vector Embeddings, Semantic Search, Gemini 2.5 Flash (Vision + Text), Groq (Llama 3/4), NLP, Scikit-Learn

DevOps & Tools: Docker, CI/CD Pipelines, Git, GitHub, Postman, Agile/Scrum, AWS (EC2, S3)

EXPERIENCE

HarmoCare – SAKEC Incubation Centre

Jan 2025 – Jan 2026

Founder & Team Lead — Full Stack Developer (MERN Stack)

Mumbai, India · Appreciation Letter

- Led an 8-member Agile/Scrum team through sprint planning and code reviews, delivering 100% of milestones on schedule for a production-ready healthcare MVP under institutional incubation.
- Architected a healthcare platform for OPD booking, bed management, and EMR by decomposing a monolith into 5 domain-driven services exposing 10+ REST APIs, each independently deployable.
- Built semantic vector search returning results in under 5 seconds; secured 3 user roles via JWT with RBAC and Google OAuth 2.0, and automated delivery through Docker and CI/CD pipelines.

PROJECTS

TrueCandidate – Real-Time Candidate Identification Engine

GitHub

FastAPI, PostgreSQL (Supabase), Groq (Llama 3.3 70B), React, WebSockets, Event-Driven Architecture

- Built a real-time fraud-detection system flagging impersonation and proxy fraud in live video interviews, combining 12+ weak-signal scoring pipelines into one confidence score.
- Designed an event-driven scoring engine where a PostgreSQL trigger computes all scores in-transaction, allowing backend instances to scale horizontally with zero cross-instance coordination.
- Engineered a latency-budgeted LLM pipeline on Groq (Llama 3.3 70B) returning consistency verdicts in under 450 ms, surfaced through a React dashboard replaying score history over Postgres Realtime WebSockets.

Zapfix – AI-Powered Home Repair Marketplace

GitHub

React Native, Expo, Supabase, Gemini 2.5 Flash (Vision), Groq (Llama 4), PostGIS, Deno Edge Functions

- Built a dual-role React Native app with a 9-state job lifecycle and real-time location tracking, powered by an AI diagnosis engine on Gemini 2.5 Flash (vision + text) detecting appliance faults from user photos and video.
- Designed 10+ Supabase Edge Functions (Deno/TS) with PostGIS matching and Row-Level Security across 18+ tables; integrated Cashfree escrow and shipped to iOS and Android via EAS Build.

Daysly – Offline-First Travel Compliance Engine

GitHub

TypeScript, React Native (Expo), SQLite, Supabase Edge Functions, Groq, Gemini, Vitest, fast-check

- Built a dependency-free TypeScript rules engine for Schengen 90/180, UK SRT, and US SPT thresholds using integer civil-date arithmetic instead of epoch subtraction, making results immune to DST and timezone drift.
- Enforced an AI safety invariant where the engine decides and the LLM only narrates: model output passes a numeric guard rejecting any date or day count not returned by an engine tool call, eliminating hallucinated figures.
- Wrote 192 unit and property-based tests (Vitest + fast-check) cross-checking the engine against a naive set-based oracle; shipped local-first with SQLite as source of truth and opt-in sync under Row-Level Security.

EDUCATION & CERTIFICATIONS

Shah and Anchor Kutchhi Engineering College — B.Tech, Information Technology; CGPA 7.92/10.0

Aug 2022 – May 2026

IBM Data Science Professional Certificate (Coursera, 2023–24), 90%+ across Python, SQL, ML, NLP, Generative AI • Full Stack Web Development, AcmeGrade × IIT Bombay (2023).
